### **SUPERMAT** Analisi di borsa settimanale (aggiornato ogni fine settimana)

L'analisi di borsa settimanale presentata dal nostro Trading System SUPERMAT è proiettata nel breve periodo. All'interno di quest'orizzonte temporale, per uno studio più attento, il report fornisce una duplice informazione articolata su due diverse basi di calcolo:

1) Analisi base 15 giorni che studia il trend principale di breve periodo.

2) Analisi base 5 giorni che studia il trend secondario di breve periodo.

Ricordiamo che il trend principale individua la componente stabile del trend, all'interno della quale si formano trend secondari più veloci e dinamici che possono avere direzioni concordi o discordi rispetto al trend principale stesso. Il trader che preferisce operare nell'immediato può far maggior riferimento alle analisi veloci su base 5 giorni. Il trader che vuole operare sempre nel breve ma su una componente meno variabile può orientarsi sulle analisi base 15 giorni. Per valutare al meglio ogni tipo di decisione, riteniamo sia preferibile tener conto di entrambe le analisi, valutando anche di astenersi nel caso di giudizi tra esse discordi e considerando invece le operazioni che presentano valutazioni omogenee. In ogni caso è fondamentale valutare bene l'ampiezza degli stop loss proposti: riteniamo di escludere le operazioni con stop loss troppo ampi che espongono a rischi eccessivi ed in tali casi è indispensabile riformulare un proprio livello di stop loss ammissibile.

Consulta il report seguente relativo all'ultima analisi SUPERMAT. Le operazioni migliori sono contrassegnate da un asterisco (\*).

### **SISTEMAT** Analisi di borsa mensile (aggiornato ogni fine settimana)

L'analisi di borsa mensile presentata dal nostro Trading System SISTEMAT è proiettata nel medio periodo. All'interno di quest'orizzonte temporale, per uno studio più attento, il report fornisce una duplice informazione articolata su due diverse basi di calcolo:

1) Analisi base 3 mesi che studia il trend principale di medio periodo.

2) Analisi base 1 mese che studia il trend secondario di medio periodo.

Ricordiamo che il trend principale individua la componente stabile del trend, all'interno della quale si formano trend secondari più veloci e dinamici che possono avere direzioni concordi o discordi rispetto al trend principale stesso. Qualsiasi sia l'orizzonte temporale di riferimento, per valutare al meglio ogni tipo di decisione, riteniamo sia preferibile tener conto di entrambe le analisi, valutando anche di astenersi nel caso di giudizi tra esse discordi e considerando invece le operazioni che presentano valutazioni omogenee. In ogni caso è fondamentale valutare bene l'ampiezza degli stop loss proposti: riteniamo di escludere le operazioni con stop loss troppo ampi che espongono a rischi eccessivi ed in tali casi è indispensabile riformulare un proprio livello di stop loss ammissibile.

Consulta il report seguente relativo all'ultima analisi SISTEMAT. Le operazioni migliori sono contrassegnate da un asterisco (\*).
